There is an error in the prefactor of the fitting function in Eq. (6) of the original article. The correct form includes the square root of $p(z)$ instead of $p(z)$. The asymptotic amplitude obtained from a given fit is larger with correct form of the prefactor. However, the same tunneling rate is obtained, and both the phase and the form of the lineshape (i.e., the linewidth) do not change since the fitting is done far away from the surface and over just a wavelength.

The online version of the original article can be found under doi:[10.1007/s10909-008-9852-0](https://doi.org/10.1007/s10909-008-9852-0).
